

## In the Claims

Please amend the claims as follows:

1. (Currently Amended) A method for providing a history of viewed broadcasting programs, the method comprising:

- enabling a user to set a predetermined time period for storing the history of the viewed broadcasting programs;
- selecting a broadcasting signal;
- extracting program data related to the history of the viewed broadcasting programs from the selected broadcasting signal;
- creating an electronic program guide (EPG) picture using the extracted program data;
- storing the program data at the predetermined time period set by the user; [[and]]
- displaying the program data related to the history of the viewed broadcasting programs in a list form, wherein titles and viewing times of each of the broadcasting programs viewed during the predetermined time are stored in a memory; and
- performing an authentication process to display the program data.

2-4. (Canceled)

5. (Currently Amended) An apparatus for providing a history of viewed broadcasting programs, the apparatus comprising:

- a tuner for selecting a broadcasting signal;
- means for extracting program data related to the history of the viewed broadcasting programs from the selected broadcasting signal;
- means for creating an electronic program guide (EPG) picture using the extracted program data;
- means for storing the program data for a predetermined time period set by a user; [[and]]
- means for displaying the program data related to the history of the viewed broadcasting programs in a list form, wherein titles and viewing times of each of the

broadcasting programs viewed during the predetermined time period are stored in a memory; and

means for performing an authentication process to display the program data.

6. (Original) The apparatus of claim 5, further comprising means for inputting user's history search request and history set request.

7. (Canceled)

8. (Currently Amended) An apparatus for providing a history of viewed broadcasting programs, the apparatus comprising:

a tuner configured to select a broadcasting signal;

an extractor configured to extract program data related to the history of the viewed broadcasting programs from the broadcasting signal;

a generator configured to create an electronic program guide (EPG) picture using the extracted program data;

a storage configured to store the program data; [[and]]

a display unit configured to display the program data related to the history of the viewed broadcasting programs in a list form when a user inputs a searching request, wherein titles and viewing times of each of the broadcasting programs viewed during a predetermined time period set by the user are stored in the storage; and

an authentication process unit configured to perform an authentication process to display the program data.
